

ANTONY GORMLEY

FIRMAMENT IV OPENS IN SYDNEY, AUSTRALIA

7 May - 3 July 2010: FIRMAMENT IV is constructed from 1,030 150mm diameter steel balls and 1,849 steel elements, welded together to create a non-regular, polygonal structure whose form dissolves and resolves throughout the gallery. Measuring 20 x 12.6 x 8.4 metres, FIRMAMENT is an assembled matrix of volumes that map a celestial constellation while also implying the form of a body lost within it. With its graphic outline, FIRMAMENT, the fourth in a series of works that attempt to map space, is the most monumental to date. The work was developed with designer and engineer Tristan Simmonds and it builds upon a three year collaboration which has resulted in the realisation of major projects all over the world.
